Installation Instructions for Permanent Mount Counter Stool Base

There are three types of floor attachments for the NewRetroDining.com Heavy Duty soda fountain counter stools. All orders must specify which type of attachment is required for the install. In order to install a Bar Stools and Chairs' counter stool, you **must have** a model WR100 counter stool wrench. The current price of a stool wrench is \$44.00.

Type A attachment:

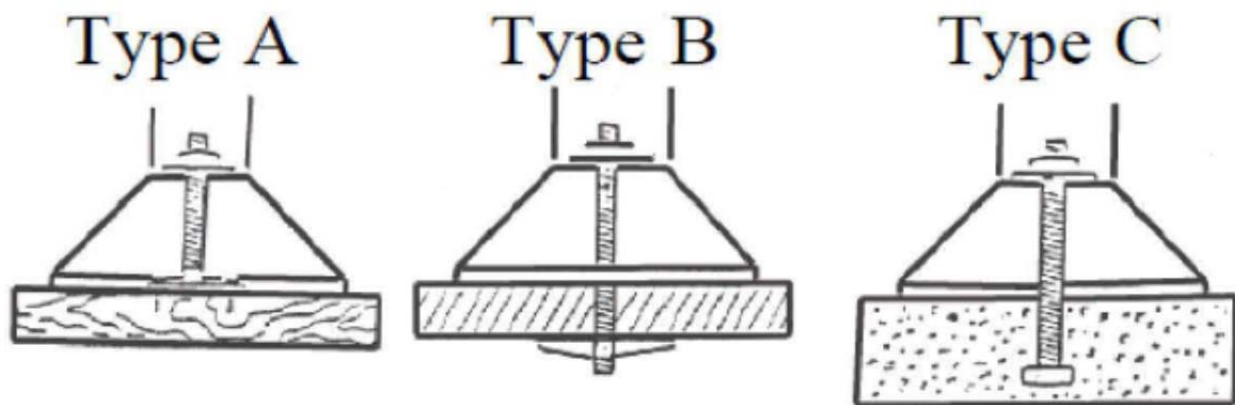

The type A attachment will work on any wood floor. Type A consists of a 4x4 inch heavy floor plate that screws into the wood floor. The plate is attached to a 4 inch bolt that is used to attach the stool base to the floor.

Type B attachment:

The type B attachment will work **only** on any wood floor that you can get to the underside of the floor, such as above a basement. Type B used a toggle bolt to hold itself to the floor. The counter stool base can then be attached to the toggle bolt.

Type C attachment:

The type C attachment is the most common type of attachment and is used for concrete floors. In order to attach type C to the cement floor you must drill a hole 4 inches deep and 1 inch in diameter with a masonry drill and drill bit. Place the bolt into the hole and use Por-Rok quick drying cement to secure the bolt to the concrete. Make sure the bolt is at a 90 degree angle to the floor while the cement is drying. Refer to instructions on package of Por-Rok for the proper drying time.

WOOD BAR STOOLS

Standard Features

Top commercial quality beechwood construction
Select from solid wood seat or upholstered seat
Option to choose from 3-5 wood finishes
Available in 24", 26" and 30" seat height

Features over 100 different vinyl fabrics
Select from stylish brass or chrome footrest rail
